Possibility to transfer money
Convert currencies

Database

Type of accounts

Account of worker

Account of client

What problems can our program solve?

In a world of innovative technology, this automated system can easily replace the time-consuming calculations associated with money. To meet the needs of future customers and the rapidly changing financial landscape, banks must change and restart their strategy. The economy of the next decade will force banks to adopt a future technology strategy that delivers unprecedented levels of adaptability and resilience, or fail.
